

Senior Developer

BackOffice Associates, LLC is a leading provider of business-process oriented web applications. Our unique technology allows an open architecture platform for delivering web-services that offer instant value opportunities to content driven processes.

Position Summary

Responsible for the development, maintenance and support of Windows and web applications. This will involve implementing new features, as well as fixing any defects found within the software.

Working with customers, where required, to solve issues with application functionality. Assist users in the creation of valid templates based on specific user requirements.

Working with the testing team to provide details on new or altered functionality to assist with testing and test case creation.

Working with the sales team to provide product demonstrations and training sessions. Assisting sales team with any technical questions related to the products. Providing prospects with the necessary details, software and keys to enable an evaluation of the software products.

Responsibilities

- Prepare functional and technical specifications for new features. Perform research of new technologies, new features as well as finding solutions to problems.
- Code new features or fixes to the Quadrante products utilizing test driven development methodologies. Create and maintain product documentation (help files, installation guides, code comments, user guides).
- Conduct on-site and online product demonstrations and training sessions. Provide sales and marketing team with any technical details or documentation where required.
- Support customers with application issues. Assist users with difficulties in creating upload/download template creation for use within the products.
- Provide assistance to testing team, where necessary, to aid in testing and test case creation
